Report of Seminar

The Internet of Things is a system of wireless, interrelated, and connected digital devices that can collect, send, and store data over a network without requiring human-to-human or human-to-computer interaction. The IoT promises many benefits to streamlining and enhancing health care delivery to proactively predict health issues and diagnose, treat, and monitor patients both in and out of the hospital. The aim of this viewpoint paper is to provide an overview of the current IoT technology in health care, outline how IoT devices are improving health service delivery, and outline how IoT technology can affect and disrupt global health care in the next decade. The potential of IoT-based health care is expanded upon to theorize how IoT can improve the accessibility of preventative public health services and transition our current secondary and tertiary health care to be a more proactive, continuous, and coordinated system.

Under the guidance of Principal Dr. Deepak H Joshi Sir, a online seminar was organized for the students on 01 /09 /2022 on the topic "Application of Internet in Research " In which Dr.Minaxiben Parmar Madam gave very useful information to the students about the importance of psychology. Many students participated in it. By browsing the Internet, much as you would browse the shelves of a library, you can access information on seemingly limitless topics. In addition, web-based catalogs are available in many libraries to assist researchers in locating printed books, journals, government documents, and other materials. The objective of this seminar was to make the students know that it is necessary to go to the library to do research, but apart from this, you can also do your research online well with the help of different websites and journals.

Department of Psychology Report of Seminar

Cognitive behavioral therapy (CBT) is a form of psychological treatment that has been demonstrated to be effective for a range of problems including depression, anxiety disorders, alcohol and drug use problems, marital problems, eating disorders, and severe mental illness. Numerous research studies suggest that CBT leads to significant improvement in functioning and quality of life. In many studies, CBT has been demonstrated to be as effective as, or more effective than, other forms of psychological therapy or psychiatric medications. It is important to emphasize that advances in CBT have been made on the basis of both research and clinical practice. Indeed, CBT is an approach for which there is ample scientific evidence that the methods that have been developed actually produce change. In this manner, CBT differs from many other forms of psychological treatment.

Under the guidance of Principal Dr. Deepak H Joshi Sir, a online seminar was organized for the students on 21 /07 /2022 on the topic "Cognitive Behavioral therapy ". In which Dr.Dilipsigh Behola gave very useful information to the students about the importance of psychology. Many students participated in it. CBT aims to teach people that it is possible to have control over your thoughts, feelings and behaviours. CBT helps you to challenge and overcome automatic beliefs, and use practical strategies to change or modify your behaviour.

Report of Seminar

A rare disease is a disease that affects a small percentage of the population. In some parts of the world, the term orphan disease describes a rare disease whose rarity results in little or no funding or research for treatments, without financial incentives from governments or other agencies. Orphan drugs are medications targeting orphan diseases. Most rare diseases are genetic in origin and thus are present throughout the person's entire life, even if symptoms do not immediately appear. Many rare diseases appear early in life, and about 30% of children with rare diseases will die before reaching their fifth birthdays. With only four diagnosed patients in 27 years, ribose-5-phosphate isomerase deficiency is considered the 2nd rarest known genetic disease being beaten only by Fields Condition affecting three individuals, Catherine and Kirstie Fields, and one unknown person. No single number has been agreed upon for which a disease is considered rare. Global Genes has estimated that currently approximately 10,000 rare diseases exist globally, with 80% of these having identified genetic origins.

Under the guidance of Principal Dr. Deepak H Joshi Sir, a seminar was organized for the students on 04/03/2022 on the topic " National Rare Disease Day ". In which Dr. Maulikbhai J Patel gave very useful information to the students about the rare disease . Many students participated in it. In this seminar, students came to know what rare diseases are and how a person becomes victim of all these diseases.

Department of Psychology

Report of Seminar

Counseling involves therapy, on a talking basis, that aims to help people develop self-understanding and make positive change. The factor that differentiates counseling from other forms of therapy, such as psychiatry and psychology, is that it is significantly less regulated; although there are university degrees and registration bodies for counselors.

Under the guidance of Principal Dr. Deepak H Joshi Sir, an online seminar was organized for the students on 17/12 /2021 on the topic "importance of counseling psychology" In which Dr.Dipikaben Dusha gave very useful information to the students about the importance of psychology. Many students participated in it. Counseling as a part of educational activities helps students in their social life. It enables them to come up with experiences that will assist them in understanding themselves and how to live effectively with others in school and society. Along with this, the student also gets to know that he can make his career in counseling psychology. This seminar has been organized to prove that the student should know all these things and can make his future in the field of psychology as per his interest.

Report of Seminar

Plagiarism is a major problem for research. There are, however, divergent views on how to define plagiarism and on what makes plagiarism reprehensible. In this paper we explicate the concept of "plagiarism" and discuss plagiarism normatively in relation to research. We suggest that plagiarism should be understood as "someone using someone else's intellectual product (such as texts, ideas, or results), thereby implying that it is their own" and argue that this is an adequate and fruitful definition. We discuss a number of circumstances that make plagiarism more or less grave and the plagiarizer more or less blameworthy. As a result of our normative analysis, we suggest that what makes plagiarism reprehensible as such is that it distorts scientific credit. In addition, intentional plagiarism involves dishonesty. There are, furthermore, a number of potentially negative consequences of plagiarism.

Under the guidance of Principal Dr. Deepak H Joshi Sir, a online seminar was organized for the students on 30 /08 /2021 on the topic "plagiarism in Research ". In which Dr.Minaxiben Parmar Madam gave very useful information to the students about the importance of psychology. Many students participated in it. Passing off another's work as your own is not only poor scholarship, but also means that you have failed to complete the learning process. Plagiarism is unethical and can have serious consequences for your future career; it also undermines the standards of your institution and of the degrees it issues. Students should know all these things so that they do not choose any wrong path for their development. For this reason a seminar was organized on the topic of plagiarism in research.
